To whom it may concern,

Bayer Becker has been providing quality consulting design services for Sanitation District No. 1 (SD1) of Northern Kentucky since 1991. These services have included the design of major sanitary trunk mains, collection lines, elimination of lift stations, combined sewer separation projects, storm sewer design and most recently green infrastructure projects.

Bayer Becker has been actively involved over the years in assisting SD1 in vision, design guideline and policy creation by serving on numerous volunteer boards and committees. Jay Bayer, their President, participated in our five-day Innovative Storm Water Design Workshop and has also volunteered countless hours actively serving on our Watershed Community Council, a focus group for watershed planning.

Bayer Becker served as the design firm for the high profile St. Elizabeth Medical Center facility nearing completion in Covington. Located in our largest CSO drainage area, SD1 retained Bayer Becker's civil engineers and landscape architects to design and provide construction administration services for the water quality basin. Bayer Becker also designed the rain gardens and assisted St. Elizabeth Medical Center in obtaining funding for the green roof.

SD1 most recently signed a contract with Bayer Becker for design of an extended dry detention basin to be located on the Notre Dame Academy facility where Bayer Becker also designed the wetland and rain garden.

Based on their knowledge, commitment to service and track record of success, Bayer Becker is positioned to assist SD1 with many future green infrastructure projects.

Sincerely,

Jeffery A. Eger
General Manager
